

Surface and Windows 11: A powerful solution

Continue your journey with Windows 11 on Surface and learn more today.

In partnership with Windows 11, Surface devices are created and tested to optimize the most secure, manageable, and productive Windows ever.

Powerful collaboration experiences

Organizations can achieve more by giving employees the tools they need to capture ideas more accurately than ever before, including a new customizable pen menu, touch screen display, Windows 11 voice typing, and more.

Best-in-class security and authentication

Logging in is as simple as a smile with Windows Hello. Improved algorithmic technology in Windows 11 coupled with enhanced Surface camera system hardware and infrared sensors authenticate and unlock your PC instantly.

Productive multitasking capabilities

With multiple desktop windows that allow you to context-switch in seconds, you can easily move between work, home, and anywhere in between—and pick up where you left off with docking experiences that remember how your apps were laid out.

Seamless management and deployment

Windows Autopilot reduces the time you spend on deploying, managing, and retiring devices, while the Device Firmware configuration interface (DFCI) secures the hardware components of your Surface devices down to the firmware level.

Refresh your devices with Surface and Windows 11
