

We are pleased to bring to you a [Microsoft Azure offer](#) designed to expand your business, increase your profitability, and shape your customers' digital transformation.

**Earn a \$150CAD credit on account for each of your customers who reach a min. \$700CAD of monthly Azure billed revenue for the first time from the previous 12 months.**

If you want to discuss a little more about this incentive and opportunities in the cloud, just [schedule an appointment](#) with our team of engineers.

#### Terms and Conditions:

Promotion will run from March 1 to June 30, 2020 and based on the minimums of Azure billed revenue (ABR) in Canadian dollars for the first time from the previous 12 months. The 12 month "look back" is based on the date the customer hits the \$700 of ABR. For example, if a customer transacts a min. of \$700 on March 25, 2020, Microsoft will look back to March 25, 2019 for that customers ABR that may meet or exceed \$700. If no transaction has been found, the March 25, 2020 transaction qualifies, and the reseller will then earn \$150 for that customers transaction. Incentive is paid as credit on account in Canadian dollars. Resellers may earn incentives on every customer that qualifies e.g. if a reseller has 10 customers that qualify for the \$700 threshold, then the reseller will earn \$150 x 10 customers. Resellers must be a Canadian reseller selling to a Canadian customer, with the transaction taking place in Canada. The ABR level will be measured in CSP Azure billed revenue that is transacted in either the legacy platform or the new commerce experience platform.

By participating or accepting the prize, reseller has granted SYNNEX Canada's marketing permission to use their full name, company name and associated logos respective of any communication in relation to the promotion. Standard SYNNEX Terms and Conditions and privacy information policy apply. This contest shall be void where prohibited or restricted by law. SYNNEX Canada and Microsoft reserves the right to modify or cancel the promotion at their own discretion.
