Cisco Secure Hybrid Work Solution
Enable security everywhere so you can empower anywhere

The Cisco Secure Hybrid Work Solution unifies protection at scale, making it easy to verify users and devices, enable secure access and defend hybrid workers at any time from anywhere. With security that works together, this integrated solution helps accelerate your business success to deliver the power of Secure Access by Duo, AnyConnect, Umbrella, Secure Endpoint and Secure Email Cloud Mailbox.

With Cisco Secure Hybrid Work, you have a simple, unifying solution to enable security everywhere and empower work anywhere.

After managing the sudden switch to remote working in 2020, organisations are making a more permanent transition towards a flexible hybrid workforce. Cisco's hybrid workplace survey found that 77% of larger organisations are looking to increase their work flexibility while 58% of employees plan on working from home for 8 or more days each month.

A hybrid workforce comes with its own challenges. The FBI found that cybersecurity attacks rose by 3-4 times as a result of the transition to remote working in 2020. In addition, experts predict that ransomware will cost the world up to $20 billion in 2021 and is expected to be a greater concern with the hybrid working model. As a result, you'll need to rapidly scale your security to account for the massive influx of remote and hybrid workers while simplifying and unifying your IT systems. Cisco Secure can help.

Benefits

Unify—Seamlessly integrated solution for any workforce

Simplify—Easy and effective answer to cybersecurity

Anywhere, everywhere—For the hybrid future: whether in the office, working remotely or anything in between

CISCO The bridge to possible

ıllııllı **SECURE**
CISCO

A solution for organisations to secure their hybrid workers no matter where they are – in the office, working remotely or anything in between.

Enable a Zero Trust approach to balance security and usability

Verify user identity and gain better visibility across your users and devices by establishing trust at every access request, no matter where it comes from.

Cisco Secure Access by Duo
Duo verifies the identity of all users before granting access to corporate applications.

Cisco AnyConnect
AnyConnect enables secure access to the enterprise network for any user, from any device.

Hold the first line of defence with DNS and email protection

Keep security threats at bay by enabling the most advanced, secure and reliable technology at the front line.

Cisco Umbrella
Cisco Umbrella offers cloud-delivered security to extend protection to devices, remote users and distributed locations anywhere.

Cisco Secure Email
Email is the leading vector for cybersecurity attacks. Detect, block and remediate threats before they happen with Cisco Secure Email's advanced threat defence.

Maintain the last line of defence at every endpoint

Secure your company's data at every endpoint with protection, detection, response and user access coverage.

Cisco Secure Endpoint
Our cloud-native solution delivers robust protection, detection and response to threats, reducing remediation times by as much as 85 percent.

Why Cisco Hybrid Work Solution will be effective for your business:

- 100% of Fortune 100 companies use Cisco Secure

- 900M authentications per month (source: Cisco Secure Access by Duo)

- 87M endpoints detected (source: Cisco Talos)

- 50% reduction in alerts (source: Cisco Umbrella)

- 75% reduction in malware (source: Umbrella TechValidate survey)

Accelerate threat investigation and response through a built-in, integrated platform

Detect and block security threats everywhere before they reach any target in your environment with a platform and threat intelligence embedded in every Cisco Secure product.

Cisco SecureX

SecureX is a built-in platform that simplifies your security by providing better visibility and automation.

Cisco Talos threat intelligence

Cisco Talos is one of the largest commercial threat intelligence teams in the world and will help your business stop threats before they happen.

Cisco Secure Hybrid Work Solution is everything you need to protect your business for any work model. Instead of disjointed point products, get a seamlessly integrated experience with a single solution.

1. Simple to use, simple to choose – deploy SaaS products to protect your workforce, whether working remotely, in the office or anything in between

2. Products work together via the SecureX platform

3. Flexibility and simplicity when you buy with a Cisco Secure Choice Enterprise Agreement

Take the next step to secure your hybrid workforce
