Google for Education makes it easy for your customers to complete necessary tasks.

### Simplify deployment

Provide IT with access to device policies and fleet oversight capabilities for both school-issued and student-owned devices, all from the cloud-based Google Admin console.

### Administer tests at scale

Enables IT departments to lock devices into a secure environment for testing or use a Chromebit and the Chrome sign builder extension to set up digital signage for events such as parent/teacher nights.

### Set security policies

Active Google Safe Search for web search queries and Restricted Mode for YouTube ensure the content students view is appropriate and safe.

# Enforce Device Settings

Google for Education makes it easy for your education customers to easily configure features and devices. With device settings, they can:

### Enforce Device Settings

#### Ensure educational use

Ensures school-owned Chromebooks are only used for educational purposes by disabling guest mode and restricting sign in to your customer's domain.

#### Protect enrollment and access

Prevents anyone from removing a device from your customer's domain.

#### Autocomplete domain

Speeds up the sign in process by autocompleting a school's domain. This capability is ideal for touch screen devices and younger students.

### Enforce User Settings

#### Push apps and extensions

Administrators can easily push educational web apps to groups of students, be it 100 or 10,000.

#### Customize the Chrome Web Store

Creates an instance of the Chrome Web Store specific to your customer's school domain. Your customer can whitelist or blacklist the entire store or just specific extensions and apps to keep their devices secure.

#### Route through a proxy

Specifies how your customer's devices connect to the internet in order to track and filter activity. Provides students a consistent experience wherever they log in.

#### Set public session settings

Adjusts the features of each device to fit the setting—your customers can control whether users can access webcams, speakers, external hard drives, or printers (local or cloud-based).

Keep Devices and Data Secure

Automatic Update Expiration, or AUE, is a shelf life that ensures the latest software is always operating on the most suitable hardware. After AUE, devices will no longer have:

Security

Devices will stop receiving security updates for Chrome OS and Chrome browser as soon as they pass their AUE date.

Support

Google Support is unable to help with expired devices. Even if they're able to pinpoint the issue, there is no way to push updates or fixes to resolve it.

Compatibility

As devices miss critical updates, the likelihood increases that certain apps and extensions will become incompatible and stop working altogether.

For advance notice of AUE dates for each Chrome device, [click here](#).

# Student Apps

Engage. Inspire. Educate.

Apps that spark creativity and create engaging, accessible learning opportunities for all students.

## Wheatley Park School

Wheatley Park School wanted to enter the 21st-century technologically and find tools to make learning easier for teachers and students.

### Everything gets easier

Chromebooks makes the lives of students and teachers at Wheatley Park dramatically easier in many small but meaningful ways, from sharing files to recording video to saving all work to Google Classroom. Science teacher Mrs. Clifton Rabone explains that “all of those incremental gains make a huge difference to my experience as a teacher.”

### Snow days

In December 2017, a major snowstorm gave Wheatley Park their first snow days in six years, but the school maintained some sense of normalcy. Teachers and students could access all of their work, share files, hold class, and collaborate whether snowed in or not.

### Learning gets personal

With Chromebooks, teachers find it easier to test students knowledge and then meet their individual needs, often giving out unique and tailored assignments to different students in a single classroom.

### Chromebooks in action

As you walk around Wheatley Park, you see Chromebooks in every classroom – often out on a desk next to a textbook – from recording experiments in biology to students analyzing their diets in physical education.

LEARN MORE

### Ames Community School District

The Ames Community School District believes in getting their students in front of the latest technology and helping them use that technology in practical and creative ways.

#### Flipping the classroom

Mrs. Reisetter felt like she never had enough class time to really teach 7th grade math, so she flipped her classroom, recording video lessons with Explain Everything for her students as “homework”. Now, she can now spend in-class time working with students individually and in small groups.

#### Learning in 3D

Mr. Lodermeier teaches Tinkercad to groups of 8th graders. Students design, proof, and 3D print their own projects in a former computer lab (now stripped of desktops) suped up with collaborative workstations and 3D printers.

#### Starting them early

Mrs. Spaulding uses the Peacock app on Chromebooks to teach her kindergarten class to count. The students use their “magic pencils” (as she calls them) to practice counting and writing numbers directly on the screen.

#### STEM for lunch

4th and 5th graders come to the Maker Lab on their lunch break to use Hummingbird robotis kits and their Chromebooks to bring to life all sorts of loud, blinking, and walking creations.
