

HEADSET MANAGEMENT THEN AND NOW:

Five ways Plantronics Manager Pro helps IT manage headsets company-wide

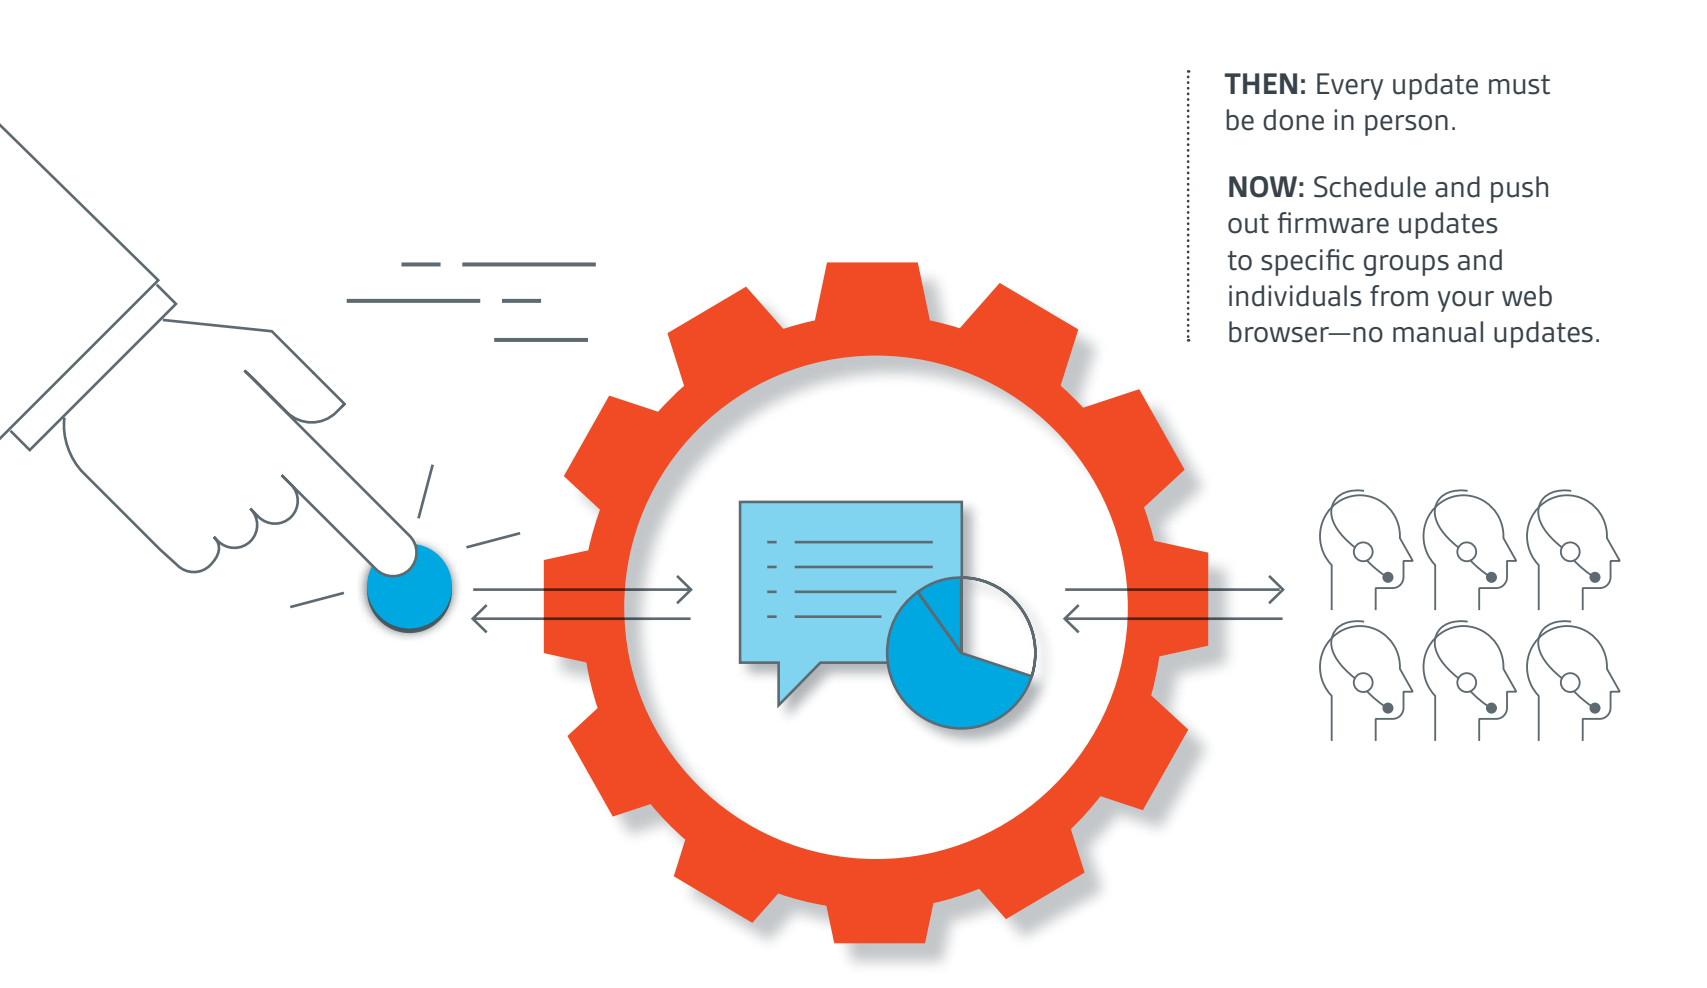

EFFORTLESS MANAGEMENT FOR HEADSETS

As an IT manager, you're responsible for hundreds or maybe even thousands of headsets throughout your company. It can be a big task to monitor, manage, and maintain them—until now. Plantronics Manager Pro provides a cloud-based, near-real-time view of every Plantronics headset being used throughout the organization. Here are five ways it'll help make headset management effortless.

1 WEB-BASED MANAGEMENT  
"Now I can see it all."

**THEN:** No clear visibility of complete headset inventory.  
**NOW:** View and track all headset assets company-wide using your web browser.

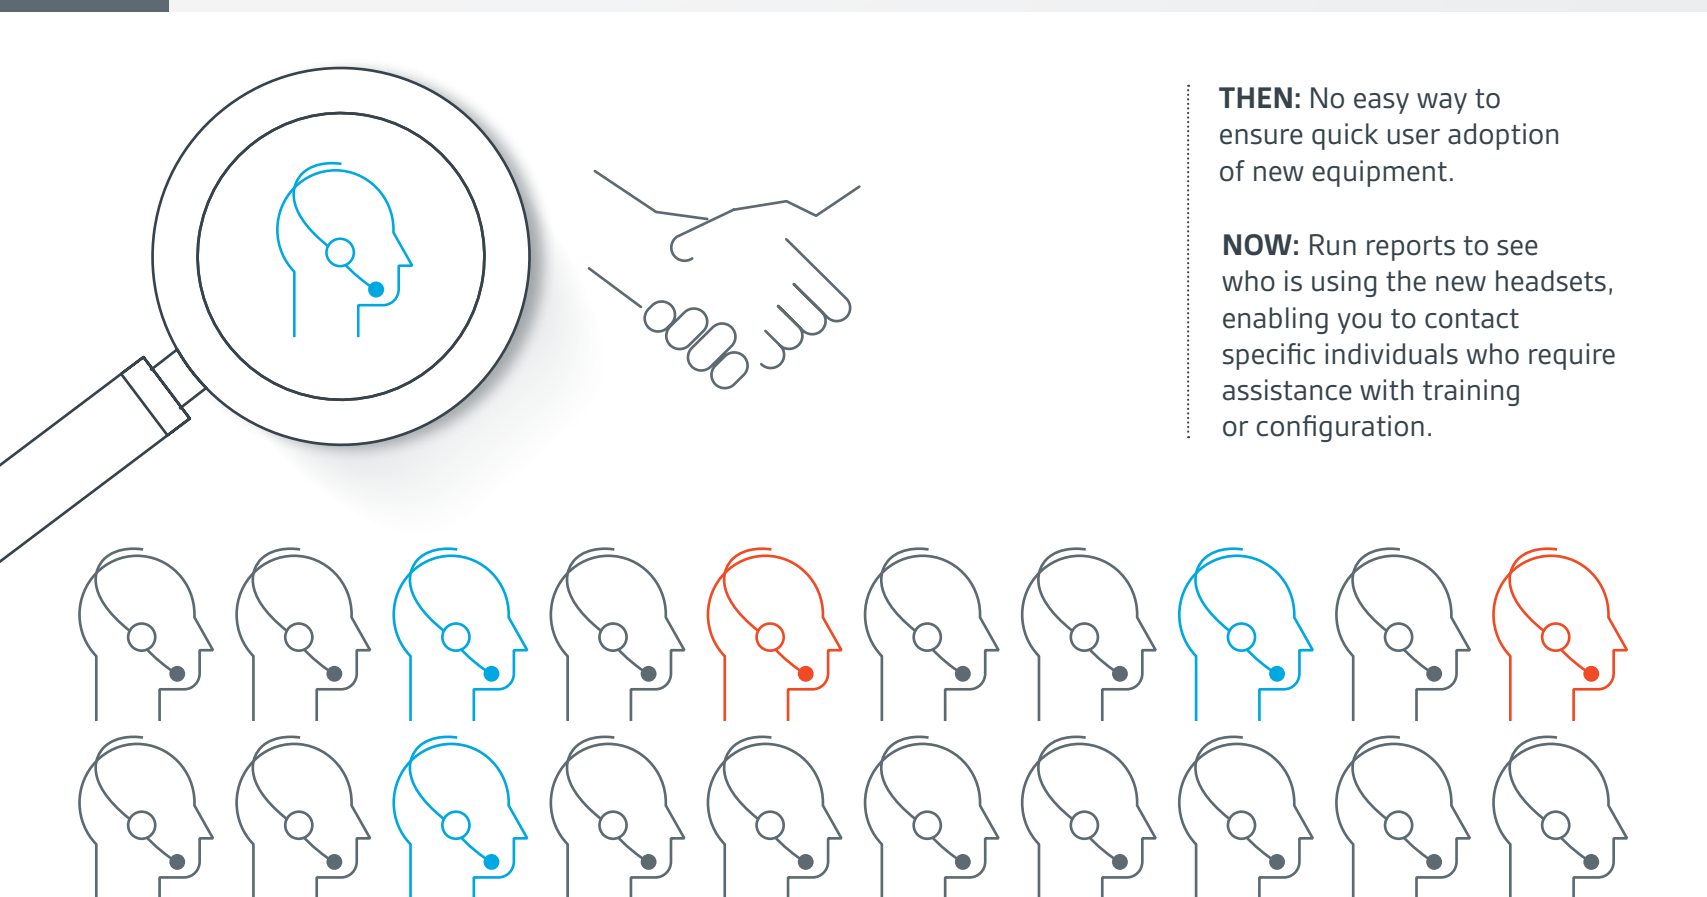

2 PROACTIVE MANAGEMENT  
"Now I can run everything from here—without actually running."

**THEN:** Every update must be done in person.  
**NOW:** Schedule and push out firmware updates to specific groups and individuals from your web browser—no manual updates.

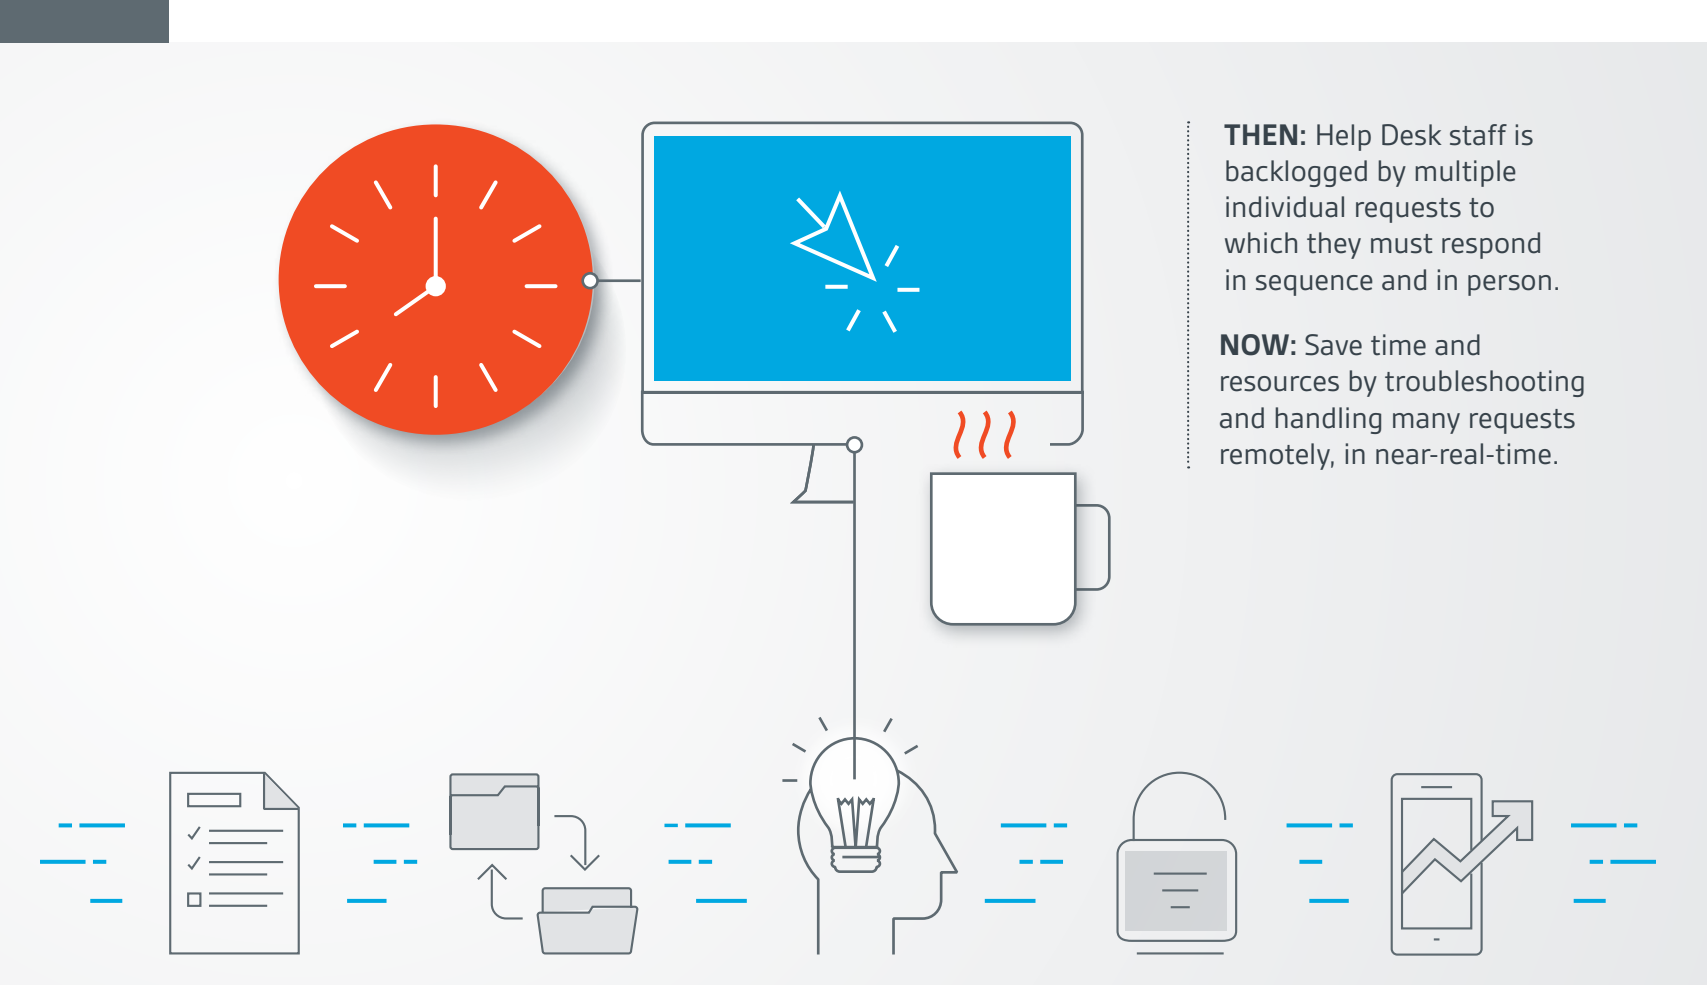

3 REGULATORY COMPLIANCE  
"Now I know we're always in compliance."

**THEN:** No direct ability to ensure compliance with company policies.  
**NOW:** Perform near-real-time monitoring of devices, with the ability to disable and lock Bluetooth settings.

4 TRAINING AND CONFIGURATION ASSISTANCE  
"Now I can help more users, more rapidly."

**THEN:** No easy way to ensure quick user adoption of new equipment.  
**NOW:** Run reports to see who is using the new headsets, enabling you to contact specific individuals who require assistance with training or configuration.

5 TIME AND RESOURCE MANAGEMENT  
"Now I can concentrate on other Help Desk requests."

**THEN:** Help Desk staff is backlogged by multiple individual requests to which they must respond in sequence and in person.  
**NOW:** Save time and resources by troubleshooting and handling many requests remotely, in near-real-time.

All-in-one headset control.  
All in the cloud.
