

Campus Safety and Security

Partner with SYNNEX to Provide Campus Safety and Security Solutions

Schools, districts, and higher-education campuses are increasingly implementing safety and security solutions to ensure students' wellbeing. Safety is as important as ever, and statistics show that schools will continue to rely on technology to prevent security issues and create a safe learning environment. Are your education customers looking to improve safety and security for their students? SYNNEX offers the following solutions for school campuses.

Campus Safety and Security Solutions

Questions to ask educational institutions to quickly assess their physical security needs:

- When is the last time your security system and software was updated?
- Is your video surveillance footage clear enough to identify individuals?
- Is your video surveillance storage capable of keeping film secure and accessible?
- Does your visitor management system allow for individuals to be checked against law enforcement lists?

Sample Solutions for School Campuses

- Security cameras around campus
- Control room and viewing consoles
- Badged entry into buildings
- Locked doors with access controls
- Body-worn cameras for campus security
- Video footage storage in the cloud

Security opportunities on school campuses:

- The average age of US school buildings is 44 years old. Campus security solutions will be needed for new construction and as schools continue to update their infrastructure.
- 75% of schools report using security cameras, which means many are using outdated analog solutions. 25% still need to implement these solutions.
- 68% of public schools require that faculty and staff wear ID badges, and only 9% require students to wear them. Visitor management and building access control is a necessary component of campus safety.
