

# PROTECT YOUR DATA, PROTECT YOUR BUSINESS.

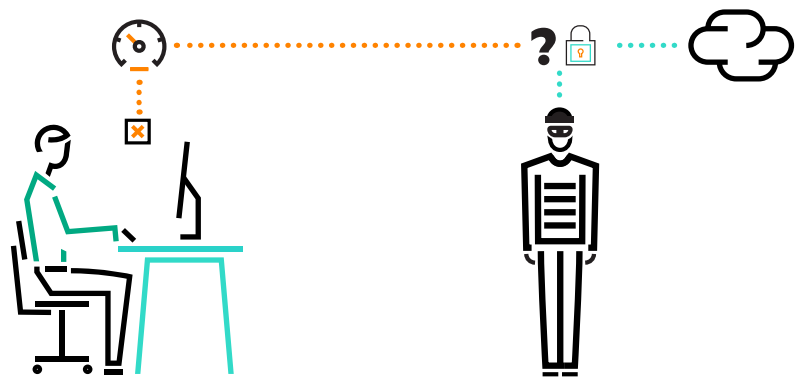

Imagine you're running a small accounting firm. Your cloud provider just got hacked. All your data could be gone forever—or worse—stolen.

## WHERE SHOULD YOU KEEP SENSITIVE DATA?

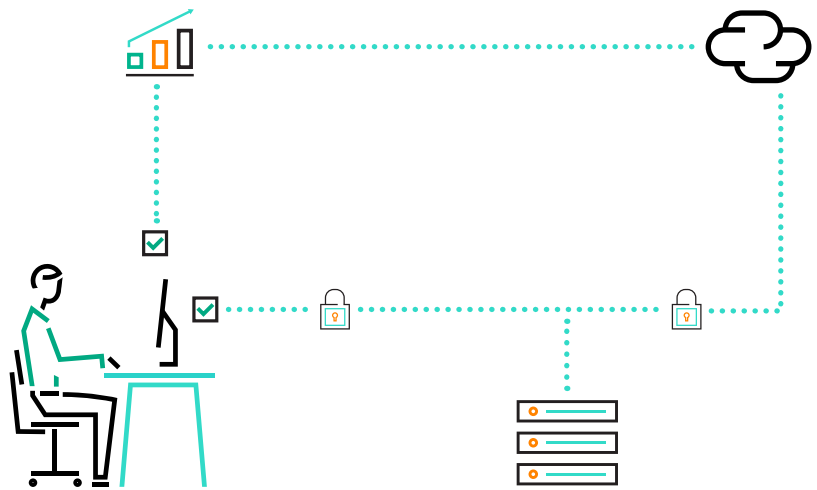

### Cloud-only

Convenient, but subject to service disruptions and unknown security practices.

### Cloud + on-premises

Evolving to hybrid cloud enables off-premises backup for enhanced business continuity. Store and protect data on-site with centralized storage and security, data protection, 24x7 availability, and optional archiving and disaster recovery storage.

## ENHANCE PEACE OF MIND WITH ARCHIVING AND DISASTER RECOVERY OPTIONS

### Keep the business running

Securely store and back up applications, files, and data for business continuity and disaster recovery.

### Improve productivity

Easy sharing and organizing of files—and no need to worry about data loss.

### HPE RDX Removable Disk Backup System

Unmatched portability, fast recovery, and easy integration.<sup>1</sup>

### HPE StoreEver MSL 1/8 Tape Autoloader

Unattended backup, disaster recovery, and archive.<sup>2</sup>

## YOU CAN DECIDE NOW OR LATER
