

# FUTUREPROOF YOUR WAN WITH SILVER PEAK

Silver Peak, recently acquired by Aruba, a Hewlett Packard Enterprise company, delivers the transformational promise of the cloud with a business-first networking model. The Aruba EdgeConnect self-driving wide area network platform liberates enterprises from

conventional WAN approaches to transform the network from a constraint to a business accelerator. More than 2,000 globally distributed enterprises have deployed Aruba SD-WAN solutions across 100 countries.

## *Seven ways you can futureproof your network with Silver Peak:*

### **SASE:**

Where WAN and security architectures transform together to provide leading cloud-delivered security services

### **Tackle IOT Security Challenges:**

Enforce distinct security policies for each class of IOT endpoints

### **No Matter What, No Matter Where:**

Ensure business continuity and eliminate tradeoffs between security and user-experience

### **Get Ready:**

LEO (low earth orbit) joins 5G in the race to become the preferred wireless WAN technology, adding to the list of SD-WAN connectivity options

### **With IOT Devices, Network Segmentation is Critical to Containing Security Breaches:**

Reduce network complexity and administration overhead with Dynamic Segmentation

### **With Advances in Automation and AI, Feel More Confident in Letting the Network Drive Itself:**

Focus more attention on moving your business forward and less on day-to-day administration

### **Substantial Gains in Business Efficiency and Agility:**

Establish end-to-end automation, AI and role-based policy control across a broader software-defined enterprise architecture
