THERE'S A BETTER WAY TO WAN

You Don't Have To:

Depend on MPLS at more than 6X the cost of broadband

Deal with the complexity of multiple devices for routing, security, and WAN Optimization

Worry about increased recovery time from a system failure with no proactive issue resolution

Work with limited visibility or the inability to right-size bandwidth

Rely on a network designed for on-premises applications, which cause latency issues

Pay a high premium for an average level of carrier diversity

Circuit Costs

Architecture

Automation & Agility

Visibility

Cloud

Reliability

You Can:

Meet performance SLAs with SD-WAN on consumer broadband

Unify SD-WAN, routing, firewall, and WAN Optimization with a single edge appliance

Solve problems quickly with Zero-Touch Provisioning, a self-healing network, and a single dashboard to enable tiered support

Work with real-time views of bandwidth utilization and application performance

Deliver constant application performance on-premises and in cloud with SD-WAN architecture

Access broad internet diversity at a lower cost

Aruba EdgeConnect can be inserted flexibly into any brown-field environment, allowing you to protect your current investments and modernize your WAN at your own pace.

Ready to take your business to the next level?

Build a business case for SD-WAN and measure the return on your investment by scheduling a customer value assessment today.
