

Physical and Cybersecurity

Reasons For Increased Cybersecurity

More smart devices than ever are connected to the internet making companies increasingly vulnerable. Hackers are more sophisticated and have a wider availability of hacking tools. Healthcare cyberattacks cost \$1.4 million on average due to loss of productivity, damage to reputation, and disruption in service. This does not include heavy fines levied by the government due to HIPPA violations.

Reasons For Enhanced Physical Security

According to ASHE Security Survey, maintaining hospital security has become 82% more challenging, and 61% of hospitals report the need to increase security budgets and aggressive behavior training. Over 60% of nurses have reported being assaulted on the job. Incidents of trespassing and break ins have also increased according to ASHE.

Benefits

- Decreased Criminal Activity
- Nurse/Staffing Retention
- Patient/Visitor Safety
- Cost Containment From Pirates/Hackers
- Improved HCAHPS scores
- HIPPA Compliance
- Joint Commission Regulatory Compliance

The healthcare team provides the support and services you need to be successful.

- **Assessment/design:** offers solution providers a range of device selections, assessments, migration strategies, connection with OEMs, financial alternatives, and logistic solutions.
- **Solution development:** provides access to ongoing technical support for OEMs and resellers by developing the technology solutions end users need.
- **Most current strategies:** provides the most current strategies in the delivery of technologies that allow healthcare providers and facilities to provide outstanding care and the best possible out-comes.
- **Specialized expertise:** SYNEX has a developed regulated industries department comprised of former nurses, police officers, and education professionals. Each member brings unique experiences that define real solutions and assist in assessing healthcare and industry needs.
