

EnCase® Endpoint Security

SECURITY BEGINS AT THE ENDPOINT

The effectiveness of EnCase Endpoint Security lies in its ability to accelerate the detection of malicious activity and remediate them before they can cause irreparable damage.

Deploying EnCase Endpoint Security while planning, implementing, or optimizing your network security strategy will enable you to better understand your cybersecurity risk level, identify potential security threats and quickly neutralize them.

Encase Endpoint Security enables cybersecurity professionals to proactively address critical gaps in their security framework by detecting “unknown” security risks that can result in the loss of highly sensitive data and the potential damage to their organization’s reputation and brand image. 

CLOSE YOUR NETWORK ENDPOINT SECURITY GAPS WITH ENCASE ENDPOINT SECURITY'S PROACTIVE THREAT DETECTION, INCIDENT RESPONSE AND RECOVERY

Key Benefits

Detect Endpoint Security Threats Sooner

Change the security workflow from waiting for an alert to "threat hunting," or proactively scanning endpoints for anomalies indicative of a security breach.

EnCase Endpoint Security creates a baseline of endpoint activity enabling both a historical record that can be used to recreate how a breach occurred as well as the ability to detect anomalous activity indicative of an undetected compromise.

Respond Faster

Sensitive data is what drives your business. Loss of that data is one of the greatest risks your organization faces today. Adding to this vulnerability are the rising frequency of attacks, growing costs of remediation, and lengthening time-to-response.

EnCase Endpoint Security enables you to accelerate your response time to network security breaches and significantly reduce the risk of serious data loss and associated liabilities.

Quickly validate, triage, and assess the impact of malicious activity, even in the event of polymorphic malware. Gain even greater efficiency by integrating the solution with your alerting technologies.

Recover More Effectively

Once malware or a risk of sensitive data is exposed and identified, EnCase Endpoint Security lets you take definitive action and remove any reliance on traditional remediation processes like wiping and reimaging, which results in costly system downtime, loss of productivity and potential revenue loss.

From beginning to endpoint.

ABOUT US

Guidance (NASDAQ: GUID) exists to turn chaos and the unknown into order and the known-so that companies and their customers can go about their daily lives as usual without worry or disruption, knowing their most valuable information is safe and secure. The makers of EnCase®, the gold standard in forensic security, Guidance provides a mission-critical foundation of market-leading applications that offer deep 360-degree visibility across all endpoints, devices and networks, allowing proactive identification and remediation of threats. From retail to financial institutions, our field-tested and court-proven solutions are deployed on an estimated 25 million endpoints at more than 70 of the Fortune 100 and hundreds of agencies worldwide, from beginning to endpoint.
